

antiviral and associated therapy - all results

| Treatment | Number of studies | Demonstrated or suggested results | Inconclusive results | Uncertain results | Safety results |
|-------------|----------------------|-----------------------------------|--|--|----------------|
| favipiravir | 1 study ¹ | | inconclusive results for : viral clearance (time to event analysis only) | suggested 3.7-fold increase in viral clearance but the degree if certainty is unassessable | |

Uncertain results are statistically significant results but obtain in trial with high risk of bias.

Demonstrated results are significant results obtained on the primary endpoint of a trial at low risk of bias or with some concerns.
